## **ABOUT THE COLLEGE**

Mother Teresa Pharmacy College was established in the year 2009 by MCM Educational society Sathupally which is serving the nation in the field of education since 2001.

The college was approved by PCI, Recognized by Government of Telangana state. Institute offering B.Pharmacy from 2009 and Master of Pharmacy with two specializations in Pharmaceutics 2011 and Pharmaceutical analysis from 2021.

The college has well furnished, e-teaching classrooms, a good collection of 6020 Books, 19 Printed journals, 52 e-journals in the library, Computer lab with high speed internet, Herbal garden, Separate hostel facility for girls and boys within the campus, a special playground for games and sports, also a Canteen.

The college has a very good team of committed and qualified teaching faculty, out of them few doctorates and some are registered for Ph.D and carrying out their research activity with facilities available in the college. The college encourages R&D activities through its M. Pharm, B. Pharm projects. Apart from academics our college encourages students in co-curricular activities. The college has earned name and fame for its high academic excellence, disciplined, promoting the spiritual and social value which helps in the integrated growth of the students.

## **Objective of the program:**

Autacoids or autocooids are biological factors which acts like local hormones, have long duration, and act near their site of biosynthesis. Autocooids also to describe synthesis, receptors and functions of histamine, ecosanoids, nitric oxide, angiotensin, kinins & 5-HT. To study the agents which enhance or block their effects Have different biological actions including modulation of the activity of smooth muscle, glands, nerves, platelets and other tissues. They have autocrine or paracrine effect, autocooids are also CNS depressants but they diminish with time. The perforce of working dose may be adversely affected. Anti-muscarnic effect occurs with many H1-with many histamines.

## **Outcome of the program**

The technologies described here obviously represent little more than the tip of the iceberg for the development of drug delivery systems, and few of these even extend beyond the realm of benchtop experimentation. Although these approaches are the focus of intense, ongoing research, other processes are also under consideration, including aerosol inhalation devices, transdermal methodologies, forced pressure injectables, and biodegradable polymer networks designed specifically to transport new gene therapies.

## Objective of the program:

Spoilage of pharmaceutical products and drugs are referred as the changes in the physical and chemical properties in such a way that the formulation or therapeutic agents gets deteriorate and become not suitable for use. • Microbial spoilage includes the contamination of pharmaceutical products with the microbes which leads to spoilage of the products affecting Drug safety and quality, and it not intended for use. • Shortly defined as deterioration of pharmaceutical products by the contaminant microbes.

Pharmaceutical products contain a wide range of excipients in addition to active pharmaceutical ingredients for making the formula easy to manufacture, stable, effective, and convenient to the patient. These products in the pharmaceutical industry must meet high microbiological specs which means if they are not sterile, they should have not more than a minimal microbial population at the time of product release as well as afterward. If there is microbial spoilage of products then products are unsuitable for use, resulting in financial problems to the manufacturers and also a potential health hazard to the patients. Hence microbial spoilage is required to be minimized which depends on many factors affecting the microbial spoilage of pharmaceutical products. So, the ability of the formulation to protect itself from microbial growth must ascertain to determine microbial stability of the formulation. It is done by preservative efficacy test.

Nowadays, electroanalytical methods are widely used in nanotechnological applications. They have unique features such as sensitivity, selectivity, rapid response, requirement of low volume of solutions and easy usage.

**Topics covered:**

- The study of corrosion,
- Degradation of a material
- due to reaction with its environment.
- How to control over the rate of particle growth
- Study of reduction parameters
- Method of monitoring enzyme kinetics
- Predicting the feasibility of the redox reaction
- Comparison of the relativity of metals
- Electrorefining of many non-ferrous metals<sup>10</sup>
- Industrial quality control & biomedical analysis
- Measurement of potential
- Polymer membrane electrodes

## ABOUT THE COLLEGE

Mother Teresa Pharmacy College was established in the year 2009 by MCM Educational society Sathupally which is serving the nation in the field of education since 2001.

The college was approved by PCI, Recognized by Government of Telangana state. Institute offering B.Pharmacy from 2009 and Master of Pharmacy with two specializations in Pharmaceutics 2011 and Pharmaceutical analysis from 2021.

The college has well furnished, e-teaching classrooms, a good collection of 6020 Books, 19 Printed journals, 52 e-journals in the library, Computer lab with high speed internet, Herbal garden, Separate hostel facility for girls and boys within the campus, a special play ground for games and sports, also a Canteen.

The college has a very good team of committed and qualified teaching faculty, out of them few doctorates and some are registered for Ph.D and carrying out their research activity with facilities available in the college. The college encourages R&D activities through its M. Pharm, B. Pharm projects.

## Objective of the program:

Electrochemical analysis is a collection of techniques that use electrical stimulation to analyze the chemical reactivity of a sample surface or a solution. Oxidation and reduction reaction rates are controlled and measured by a potentiostat, connected to electrodes submerged in an electrolyte.

There are five main electrochemical methods for the determination of drugs in clinical trials, including voltammetry, potentiometry, conductometry, amperometry, and impedimetric

Electrochemical techniques have their advantages because of their simplicity, low cost and speed. The only condition for this method of monitoring enzyme kinetics is that direct electron transfer must be possible or able to be achieved by mediators

## Objectives:

The advantages of electrochemical methods are that the signal is electrical and no transformation is required for transferring the information to control units. Some of the methods are rather specific and therefore can be used to detect only the species of interest.

## ABOUT THE COLLEGE

Mother Teresa Pharmacy College was established in the year 2009 by MCM Educational society Sathupally which is serving the nation in the field of education since 2001.

The college was approved by PCI, Recognized by Government of Telangana state. Institute offering B.Pharmacy from 2009 and Master of Pharmacy with two specializations in Pharmaceutics 2011 and Pharmaceutical analysis from 2021.

The college has well furnished, e-teaching classrooms, a good collection of 6020 Books, 19 Printed journals, 52 e-journals in the library. Computer lab with high speed internet, Herbal garden. Separate hostel facility for girls and boys within the campus, a special play ground for games and sports, also a Canteen.

The college has a very good team of committed and qualified teaching faculty, out of them few doctorates and some are registered for Ph.D and carrying out their research activity with facilities available in the college. The college encourages R&D activities through its M. Pharm, B. Pharm projects. Apart from academics our college encourages students in co curricular activities.

The college has earned name and fame for its high academic excellence, disciplined, promoting the spiritual and social value which helps in the integrated growth of the students.

## Objective of the program:

- Cosmeceutical are those products that elicit pharmaceutical therapeutic benefits, but not biological therapeutic benefits ,it indicates those skin care products with active ingredients beneficial for improving the appearance of the skin as well as nourishment of the skin
- The main goal is to create a formulation is stable under a variety of condition , from extreme cold to extreme heat

## Outcome of the program

The concept of QbD in the new ICH guidance, ICH Q8, will help industry for successful product development and expedite regulatory approval. A successful product development strategy required through understanding of QbD principle and the tools for establishing the QbD strategy. design of experiment, risk assessment tools. The application of QbD principle can change and control regulatory process into a science and risk based assessment

## Objective of the program:

*Nutraceuticals can improve health, delay the aging process, prevent chronic diseases, increase life expectancy, or support the structure and functioning of the body. They are also used in the prevention and treatment of mental health issues and disorders.*

## Outcome of the program

*They are the outcome from agricultural breeding or added nutrients and/or ingredients such as orange juice fortified with calcium, cereals with added vitamins or minerals and flour with added folic acid are nontraditional nutraceutical. Nutraceuticals exert their cardioprotective effect mainly through lipid-lowering effects, antioxidant actions, and/or by decreasing homocysteine levels. Nutraceuticals provide all the essential substances that should be present in a healthy diet for the human. Nutraceuticals provides energy and nutrient supplements to body, which are required for maintaining optimal health. Nutraceuticals is defined as a food or part of it that provides the body with medical or health benefits, including the prevention and treatment of a disease*

agents as well as bearing stealth property. Further, these systems can deliver drug to specific tissues and provide controlled release therapy. nanoparticles can be used as probes by attaching them to molecules of proteins, antibodies, and nucleic acids. These nanoparticles can then be used as tools for displaying and quantifying molecular reactions inside the body.

## ABOUT THE COLLEGE

Mother Teresa Pharmacy College was established in the year 2009 by MCM Educational society Sathupally which is serving the nation in the field of education since 2001.

The college was approved by PCI, Recognized by Government of Telangana state. Institute offering B.Pharmacy from 2009 and Master of Pharmacy with two specializations in Pharmaceutics 2011 and Pharmaceutical analysis from 2021.

The college has well furnished, e-teaching classrooms, a good collection of 6020 Books, 19 Printed journals, 52 e-journals in the library, Computer lab with high speed internet, Herbal garden. Separate hostel facility for girls and boys within the campus, a special play ground for games and sports, also a Canteen.

The college has a very good team of committed and qualified teaching faculty, out of them few doctorates and some are registered for Ph.D and carrying out their research activity with facilities available in the college. The college encourages R&D activities through its M. Pharm, B. Pharm projects. Apart from academics our college encourages students in co curricular activities.

The college has earned name and fame for its high academic excellence, disciplined, promoting the spiritual and social value which helps in the integrated growth of the students.

### **Objective of the program:**

Biomedical nanotechnology is a cross-disciplinary area of research in science, engineering and medicine with broad applications for molecular imaging, molecular diagnosis, and targeted therapy. Nanotechnology has extensive application as nanomedicine in the medical field. Some nanoparticles have

possible applications in novel diagnostic instruments, imagery and methodologies, targeted medicinal products, pharmaceutical products, biomedical implants, and tissue engineering. Today treatments of high toxicity can be administered with improved safety using nanotechnology, such as chemotherapeutic cancer drugs. Further, wearable gadgets can detect crucial changes in vital signs, cancer cell conditions, and infections that are genuinely happening in the body. We anticipate these technologies to provide doctors with considerably much better direct access to critical data on the reasons for changes in the signs of life or illness because of the technological presence at the source of the problem.

### **Outcome of the program**

Improved drug delivery: Nanoparticles can be used to improve drug delivery, by increasing the drug's solubility, bioavailability, and stability. This allows for lower doses of drugs to be used, reducing the risk of toxicity and side effects. Nanomaterials have noteworthy applications in nanobiotechnology, particularly in diagnosis, drug delivery systems (Faraji and Wipf 2009), prostheses, and implants. Nanoscale materials integrate well into biomedical devices because most biological systems are also nanosized. Through the manipulation of size, surface characteristics and material used, the nanoparticles can be developed into smart systems, encasing therapeutic and imaging
